#### **Academic Council Meeting No. and Date:**

Agenda Number: Resolution Number: 34 / 2.4

#### VidyaPrasarak Mandal's B. N. Bandodkar College of Science (Autonomous), Thane

### Syllabus for

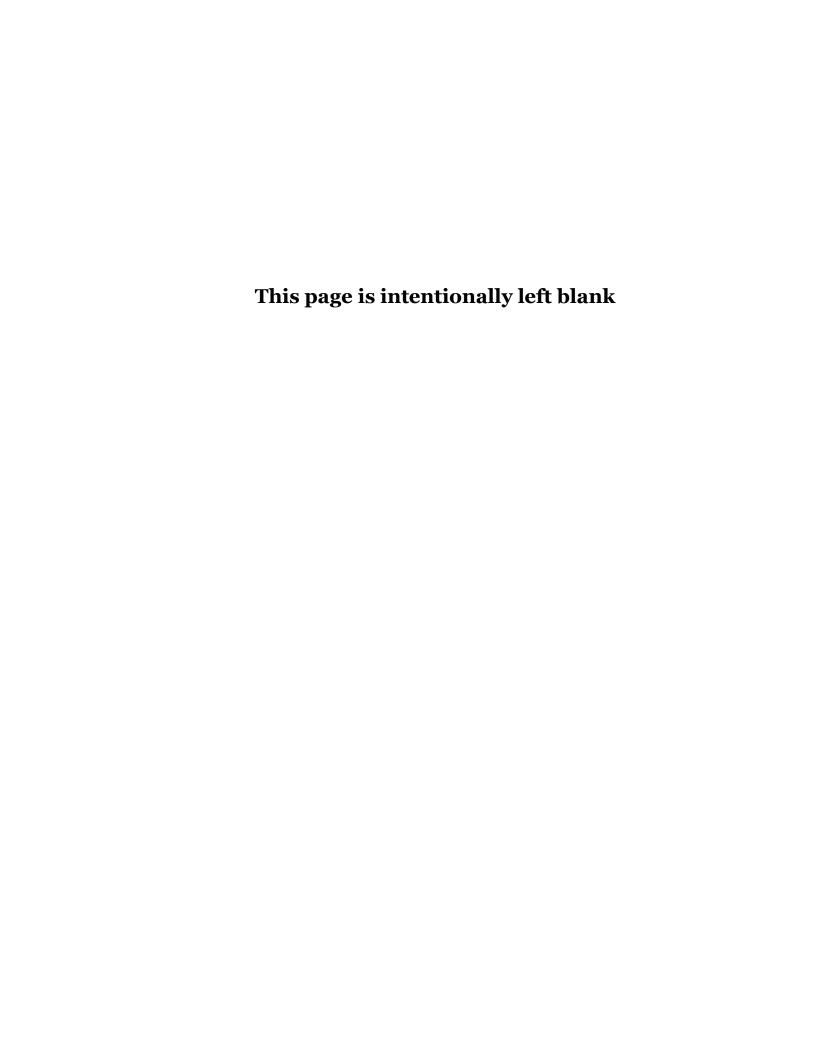

**Programme: Bachelor of Science** 

**Specific Programme: PHYSICS** 

[F.Y.B.Sc. Physics]

Proposed under Autonomy & NEP-2020

From academic year 2023 - 2024

#### **Preamble**

The systematic and planned curricula from these courses shall motivate and encourage learners to understand basic concepts of Physics. It will help the student to

- To develop analytical abilities towards real world problems
- To familiarize with current and recent scientific and technological developments
- To enrich knowledge through problem-solving, hands-on activities, study visits
- To develop good observation ability
- To understand links of Physics to other disciplines.
- To develop scientific temperament.
- To obtain solutions to scientific questions by use of qualitative and quantitative reasoning and by experimental investigation.

The syllabus is aimed to achieve certain objectives. The syllabus spanning three years, covers from fundamental concepts in Physics and give glimpses of the scenario at the frontier. The students will be ready for the higher educational opportunities and jobs available in different fields of Physics and related environment like:

- ➤ Master's degree in Physics
- ➤ Master's degree in Computer applications MCA.
- ➤ PG Course in Radiology
- ➤ Software Development (Programming C++)
- > Careers that require Scientific or Technical expertise.
- > Careers in Civil and administrative Services.

#### **Eligibility:**

Passed 12<sup>th</sup> standard (HSC) of Maharashtra State Board / CBSE / ICSE board.

Discipline/Subject: Physics

**Degree Programme:** B.Sc.

**Duration:** 1 year (Include semester I & II)

**Level: 4.5** 

Qualification Title: UG certificate

Credits Requirement: Minimum 40 or Maximum 44 Credits

#### **Mode of Conduct:**

Offline Laboratory Practical's Offline lectures / online lectures.

#### **Program Specific Outcome:**

By the end of the program the students will be able to:

Classify, propose, and analyze physical problems. Interpret the results through a wide range of experiments, data analysis, theories and techniques, concepts, and general principles of Physics.

## Semester I

	Course Code Classical Physics  Credit Classical Physics		No. of lectures	
Course Out	comes: Upon completion of this course, students will acquire kno	wledge abo	out and able to	
• Und	erstand Newton's laws and apply them in calculations of the motio	n of simple	systems.	
	erstand the concepts of friction and the concepts of elasticity, fluid	l mechanics		
	be able to perform calculations using them.			
	erstand the concepts of lens system and interference.	1		
• Dem	onstrate quantitative problem-solving skills in all the topics cover			
Unit I:	Newton's Laws: Newton's first, second and third laws of motion, (Review) interpretation and applications, pseudo forces, Inertial and non-inertial frames of reference. Worked out examples (with friction present)  Elasticity: Review of Elastic constants Y, K, η and σ; Equivalence of shear strain to compression and extension strains. Relations between elastic constants, Couple for twist in cylinder.  Fluid Dynamics: Equation of continuity, Bernoulli's equation, applications of Bernoulli's equation, streamline and turbulent flow, lines of flow in airfoil, Poiseuille's equation.			
Unit II:	Lens's formulae: Lens Maker's Formula (Review), Newton equation, magnification-lateral, longitudinal, and angular. En focal length of two thin lenses, thick lens, cardinal points of the Ramsden, and Huygens eyepiece.  Aberration: Spherical Aberration, Reduction of Spherical Aberration: Spherical Aberration for achromatic aberration.  Interference: Interference in thin films, Fringes in Wedge shap Newton's Rings (Reflective).  Note: A good number of numerical examples are expect covered during the prescribed lectures.	quivalent nick lens, perration, ped films,	15	

Course Code 23BUPH1T0			No. of lectures 30	
Course Out	comes: Learner will			
Understa	nd nuclear properties and nuclear behavior.			
Understa	nd the isotopes and their applications.			
• Understa	nd the quantum mechanical concepts.			
• Understa	nd mechanism of Nuclear reactions			
Develop	quantitative problem-solving skills in all the topics covered.			
Unit I:	Structure of Nuclei: Basic properties of nuclei, Composition, Charge, Size, Rutherford'sexpt. for estimation of nuclear size, density of nucleus, Mass defect and Binding energy, packing fraction, BE/A vs A plot, stability of nuclei (N Vs Z plot) and problems.  Radioactivity: Radioactive disintegration concept of natural and artificial radioactivity, Properties of α, β, γ-rays, laws of radioactive decay, half-life, mean life (derivation not required), units of radioactivity, successive disintegration and equilibriums, radioisotopes. Numerical problems. Carbon dating and other applications of radioactive isotopes (Agricultural, Medical, Industrial, Archaeological -			
Unit II:	information from net).  Interaction between particles and matter: Ionization chamber, Proportional counter and GM counter problems  Nuclear Reactions: Types of Reactions and Conservation Laws. Concept of Compound and Direct Reaction, Q value equation and solution of the Q equation problems. Fusionand fission definitions and qualitative discussion with examples.			

Course Code 23BUPH1P01	Major Practical	Credits 2	No. of lectures in hrs. 60	
Practical 1	Use of Vernier Calipers, Micrometer Screw Gauge			
Practical 2	Use of Travelling Microscope			
Practical 3	<b>Graph Plotting:</b> Experimental, Straight Line with intercept, Resonance Curve etc.			
Practical 4	Spectrometer: Schuster's Method			
Practical 5	Error Calculation: Absolute and relative errors calculation.			
Practical 6	Use of DMM: AC DC Voltage, current and continuity.			
Practical 7	Component Testing: Resistance, Capacitor, Diode, and Transistor.			
Practical 8	Connecting Simple circuit: Voltage divider.			
Practical 9	J by Electrical Method: To determine mechanical equivalent of heat.			
Practical 10	<b>Bifilar Pendulum:</b> To determine the moment of Inertia of a Rectangular Wooden bar.			

Practical 11	<b>Bifilar Pendulum:</b> To determine the moment of Inertia of a Spherical Wooden bar.			
Practical 12	Spectrometer: To determine of angle of Prism.			
Practical 13	<b>Spectrometer:</b> To determine refractive index of Prism.			
Practical 14	Flat spiral Spring: To determine Y Young's Modulus of a wire material by method of vibrations.			
Practical 15	Surface Tension: To determine the surface tension of water by capillary rise method.			
Practical 16	Combination of Lenses: To determine equivalent focal length of a lens system by magnification method.			
Practical 17	Thermistor characteristic: To study Electrical characteristic of Thermistor.			
Practical 18	Thermistor characteristic: To study thermal characteristic of Thermistor.			
Practical 19	<b>Newton's Rings:</b> To determine radius of curvature of a given convex lens using Newton's rings.			
Practical 20	<b>Torsional Oscillation:</b> To determine modulus of rigidity $\eta$ of a material of wire by torsional oscillations			

Course Code 23BUPH1T03	Classical Physics		No. of lectures	
Course Outo	omes: Upon completion of this course, students will acquire knowled	edge abo	ut and able to

<ul> <li>Course Outcomes: Upon completion of this course, students will acquire knowledge about the basic mathematical concepts and applications of them in physical Demonstrate quantitative problem-solving skills in all the topics covered.</li> <li>Articulate the principles of object-oriented mathematical problem solving.</li> <li>Able to formulate a problem associated with physical world.</li> </ul>					
Unit I:	Differential equations: Introduction, Ordinary differential equations, First order homogeneous and non- homogeneous equations with variable coefficients, Exact differentials, General first order Linear Differential Equation, Second-order homogeneous equations with constant coefficients. Simple Harmonic motion (spring mass system).  Transient response of circuits: Series LR, CR, LCR circuits. Growth and decay of currents/charge.				
Unit II:	Superposition of Collinear Harmonic oscillations: Linear Superposition Principle. Superposition of two collinear os having (1) equal frequencies and (2) different frequencies (Beats).  Superposition of two perpendicular Harmonic Osci Graphical and Analytical Methods. Lissajous Figures with equal unequal frequency and their uses  Wave Motion: Transverse waves on string, Travelling and waves on a string. Normal modes of a string, Group velocity velocity, Plane waves, Spherical waves, Wave intensity.  Note: A good number of numerical examples are expected to during the prescribed lectures.	cillations: l an standing ty, Phase	15		

Course Cod 23BUPH2T	•	Credits 2	No. of lecture s 30	
Course Ou  Und  Und  Solv  Und				
Unit I:	Alternating current theory: [(Concept of L, R, and C:A containing pure R, pure L and pure C (Review)], represensinusoids by complex numbers, Series L-R, C-R and LCE Resonance in LCR circuit (both series and parallel), Power in Q-factor.  AC bridges: AC-bridges: General AC bridge, Maxwell, de-Sat	ntation of circuits.	15	
Unit II:	Circuit theorems: (Review: ohm's law, Kirchhoff's laws, Thevenin's Theorem, Norton's Theorem), Superposition Theorem, Ideal Current Sources, Reciprocity Theorem, Maximum Power Transfer Theorem. Numerical related to circuit analysis using the above theorems.  Zener Diodes: (Review: Zener forward and reverse characteristics), Zener diode as voltage stabilizer. Avalanche breakdown Zener			

Course Code 23BUPH2P01 & 23BUPH2P0 2	Major Practical	Credits 2	No. of lectures in hrs. 60				
Practical 2	<b>To study load regulation of a Bridge Rectifier:</b> To study br filter.	idge rectifier w	vithout capacitor				
Practical 3	To study load regulation of a Bridge Rectifier: To study bridge rectifier with capacitor filter.						
Practical 1	<b>Flywheel:</b> To determine the moment of inertia and to determine frictional torque graphically.						
Practical 4	LR Circuit: To determine the value of given inductance.						
Practical 5	To study simple AND, OR and NOT gates						
Practical 6	To study NAND gate as Universal Building Block: Design and testing of AND, OR and NOT gate using NAND gate.						

Practical 7	To study NOR gate as Universal Building Block: Design and testing of AND, OR and NOT gate using NOR gate.
Tractical /	and NOT gate using NOR gate.

Practical 8	<b>To verify De Morgan's Theorems</b> : Design and testing of De Morgan's 1 <sup>st</sup> Theorem.			
Practical 9	<b>To verify De Morgan's Theorems</b> : Design and testing of De Morgan's 2 <sup>nd</sup> Theorem.			
Practical 10	<b>Thevenin's Theorem:</b> To verify Thevenin's theorem for DC circuits experimentally and graphically.			
Practical 11	<b>Norton's Theorem:</b> To verify Norton's theorem for DC circuits experimentally and graphically.			
Practical 12	LDR Characteristics: To study the dependence of LDR resistance on intensity of light.			
Practical 13	<b>CR Circuit:</b> To determine value of given capacitor.			
Practical 14	To study EX-OR Gate: Design half adder verify the truth table.			
Practical 15	To study EX-OR Gate: Design full adder and verify the truth table.			
Practical 16	LCR series Resonance: To determine resonance frequency of LCR series circuit.			
Practical 17	LCR parallel Resonance: To determine resonance frequency of LCR parallel circuit.			
Practical 18	Frequency of AC Mains: To determine frequency of AC mains			
Practical 19	Laser beam divergence: To study the divergence of Laser beam			
Practical 20	<b>p-n junction diode:</b> To study the characteristics of simple p-n junction diode			
Practical 21	Zener diode: To study the characteristics of simple zener diode

#### **Evaluation Scheme**

#### > Internal Examination: Class Test/ Assignments/ Tutorial Project

Duration: 1 Hour Total Marks: 20

	Answer the following	20
Q. 1		
Q.2		

#### > Theory Examination:

**Suggested Format of Question paper** 

Duration: 1.30 Hours Total Marks: 30

• All questions are compulsory

Q. 1	Answ	er <i>any two</i> of the following	10
	a	Based on Unit I	
	b	Based on Unit I	
	С	Based on Unit I	
	d	Based on Unit I	
Q. 2	Answer <i>any two</i> of the following		10
	a	Based on Unit II	
	b	Based on Unit II	
	С	Based on Unit II	
	d	Based on Unit II	
Q. 3		Bused on only if	10

#### **Academic Council Meeting No. and Date:**

Agenda Number: Resolution Number: 34/2.4

#### Syllabus for

**Programme: Bachelor of Science** 

**Programme: PHYSICS** 

[F.Y.B.Sc. Physics]

**{Skill Enhancement Course (SEC)}** 

Proposed under Autonomy & NEP-2020 From academic year 2023 – 2024

## This page is intentionally left blank

#### PROGRAM OUTLINE

Course Title & Code	Credits	Credit distribution of the course			Pre-requisite
		Lectures	Tutorial	Practical/Practice	
23BU1SEC04 Physics- Measuring skill	2	1	0	1	NIL
23BU2SEC04 OPAMP, Logic gates and Applications	2	1	0	1	NIL

#### PROGRAMME SPECIFIC OUTCOME (PSOs)

The purpose of this course is to provide students hands-on exposure to a variety of mechanical and electrical tools.

To understand and utilize the fundamental ideas about measurements in different other aspects of Science.

Able to learn Designing of Basic and universal gates using RTL and DTL and applications of OPAMP.

#### SEMESTER - I

Course Code 23BU1SEC04	Course Title Physics Measuring skill	Credit s 1	No.o f lectur es		
<ul> <li>Learning Outcomes:</li> <li>➤ On successful completion of this course the students will be able to:</li> <li>➤ Perform any issue-related tasks about the Vernier caliper Screw gauge Microscope and Spectrometer.</li> <li>➤ To test diode, Transistor and Ic's</li> <li>➤ To learn and understand the Mechanical and Electrical measurements.</li> </ul>					
UNIT- I	Introduction Measuring units.  Conversion to SI and CGS Familiarization with meter scale, Vernier caliper and it's least count Screw gauge and their utility, Microscope and it's utility. Spectrometer. Measure the dimensions of a solid block, Volume of cylindrical beaker or glass, Diameter of a thin wire, Thickness of metal sheet extra.  Electrical and electronic skill.  Use of voltmeter, Use of current metre, Use of multimeter, Testing of resistors capacitors diodes and transistor using multimeter, Introduction to IC s IC 741.IC 555 and their application, Soldering of electrical circuits having discrete components (R,C, L & Diode) and ICs on PCB and Operation of CRO and its use.

Course Code 23BU1SEC04	Course Title Physics measuring skill Practicals	Credits 1	No.of lectures 30
---------------------------	---	--------------	-------------------------

#### **Learning Outcomes**

- > On successful completion of this course the students will be able to:
- > To minimize any measurement uncertainty by ensuring the accuracy of test equipment
- > To enhance practical knowledge, skills and techniques in order to improve proficiency while applying for practical purpose.

1	Use of Vernier Callipers
2	Use of Micrometer screw gauge
3	Use of Travelling Microscope
4	Resistance of Voltmeter
5	Use of Spectrometer.
6	Use of multimeter
7	Frequency and amplitude measurement using CRO
8	Forward and reverse characteristics of diode
9	I/P Characteristics of NPN transistor
10	O/P Characteristics of NPN transistor
11	Transistor as a switch

## **Semester-II**

<b>Course Code</b>	Course Title	Credits	No.of lectures	
23BU2SEC04	OPAMP, Logic gates and	_	15	
	Applications	1		
Learning Outcomes: Upon completion of this course, students will acquire knowledge about				
➤ The IC 741 and their mathematical applications.				
Learn Designing of Basic and universal gates using RTL and DTL.				
Integrated circuit Op-Amp IC 741,Pin Diagram, Working of IC 74				
	Amp, Specifications of IC 741 Op-Amp, Op-Amp Characteristics and 74			
UNIT- I	UNIT- I Op-Amp mathematical Applications, IC 741 is used in Amplifier.  Basic Logic gates, Universal logic gates.			
References:				
1) Op-Amps and Linear Integrated Circuits by Ramakant A. Gayakwad				

2) Logic gates for beginners by Vimal Mehta

C	Course Title	Cred		
Course	OPAMP, Logic gates and	its	No.of lectures	
Code 23BU2SEC04	Applications-		30	
23DU2SEC04	Practicals	1		
Learning Outcomes				
On successful comple	etion of this course the students will be	e able to:		
> To use OPAM	IP for Mathematical operation.			
To Design gat	es using RTL and DTL Techniques.			
1	Inverting DC amplifier			
2	Inverting AC Amplifier			
3	Non Inverting DC amplifier			
4	Non- AC Inverting amplifier			
5	Op-Amp as Voltage Follower			
6	Op-Amp as Adder			
7	Op-Amp as Subtractor			
8	Op-Amp as Comparator			
9	Op-Amp as first order LPF			
10	Op-Amp as first order HPF			
11	To verify the truth table of basic gate (NOT, AND, OR)			
12	To verify the truth table of universal gates (NAND and NOR).			
13	To verify the truth table of basic gate (NOT, AND, OR) using RTL (using Resistor Transistor Logic)/ DTL (Diode Transistor Logic) circuits.			
14	To verify the truth table of universal gates (NAND and NOR). using RTL (using Resistor Transistor Logic)/ DTL (Diode			
	Transistor Logic) circuits.			

#### **Evaluation Scheme**

Examination scheme and mode:

Total Marks: 50

Theory Assessment: 25 Marks

Exam (Practical): 25 Marks

\*\*The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty
